Last 5 Dec 07 was challenging, because i did several thing :

1. I began to manage my friends account
2. I began to forward test PointBreak Expert Advisor and CK too !

so after a month i found some interesting result...

Run EA on LIVE account was never meant to be easy !

{mosgoogle}It was back to November when i excite to learn about grid trading, from David (pipforia.com) and a lot of grid concept in forex-tds. That's why i build my own grid trading system. The backtesting result from IBFX tick data (it was 99% modeling quality) quite promising, i run a forward test for a month also give best result. i have 2 years of experience code EA, but never go LIVE from someone else account

i got so anthusiast, so i could dream i could be a fund manager someday... so i ask for meeting with couple of my close friend and it seem i'm pretty good salesperson (..of course.. i run my company for more than 5 years !!) , so some of them begin to trust their own fund... some of them want to invest a quite big amount, but i'm too afraid that day. I wanted to start from small amount...

so i began to start... but things ain't easy.... as the price quite volatile, i have to monitoring the account all the time.. as the accounts grow from \$1007.5 to \$1040... drop to \$1020... up to \$1040 again.. drop to \$1011... and finaly it ended in \$1037 (it's up almost 3%, with maximal drawdown up to 10%) ..it was a great experience to me... i was satisfied though

this strategy is grid trading with 12 grid space and some carry trade grid with GBPJPY.. it's 10)% autamatically. You could view the details here .

PointBreak EA gives me 1.8% result on conservative setting

I found something regarding the pointbreak EA characteristic : you cannot compare how the curve look like, but can compare the end result .

i'm doing a forward test, ck doing forward test, we have same result with different curve. You could see my PointBreak EA result here
